

Reverse / Parallel Park

| | |
|---|--|
|  | <p>Left door mirror setting. Note the passenger side front door handle in the bottom right corner.</p> |
|  | <p>Using POM (as for moving off), approach the parked vehicle slowly and stop alongside about 1metre away and slightly ahead. Select rev gear and OBS all round!</p> |
|  | <p>Looking through rear window, reverse slowly to the first point of turn as above. OBS over right shoulder then out of rear window and ONE full turn to the left.</p> |

| | |
|---|--|
|  | <p>Alternate your OBS between the rear window and left door mirror. When the handle lines up with the kerb or the kerb just disappears turn ONE FULL LOCK to the right. Match the rate of steer to the speed!!</p> |
|  | <p>Looking out of the rear window as much as possible, glance in the mirror to assess distance from the kerb. Be prepared to use the footbrake if the car speeds up down the camber!!</p> |
|  | <p>Once parallel and close to the kerb, while reversing slowly straighten the wheels. The steering wheel should be straight and you should be far away from the vehicle in front to see tyres on the road</p> |
